## Building Reliability Into Your Applications.

There is probably no bigger fear than learning that the product you had just launched was plagued with errors or that a mission critical application in which you have devoted a great deal of investment cannot perform as desired. Thorough and detailed Software Testing of your applications before they are pressed into production can give you the assurance that your product/application will be able to perform reliably, and hence add value to your business. The difficulty in testing is knowing what to test and finding skilled professionals with the expertise in the areas that your project requires. What is the solution?

### *Outsourcing!*

Outsourcing your software testing allows you to perform a thorough review of your code, by professionals skilled in the exact tools and technologies needed, while also enabling you to deliver your product/application ahead of schedule and under cost, in many cases.

## Software Testing with Goldstone

Goldstone will dedicate a team for your testing project onsite at your facility or through one of our offsite facilities in the US or India. Our testing services include functional testing, load and performance testing, and automated regression testing. Our dedicated testing teams can work on site at your facility or offsite at one of our state-of-the-art development centers employed with the latest in communication and computing technologies.

## The Advantages of Outsourcing Software Testing to Goldstone Technologies:

- Unbiased and Independent assessment
- Fully compliant with ISO and CMM standards
- Expertise using a variety of testing tools
- Effective Testing Methodologies
- Professional Testing
- Experienced Testers and Managers
- Reduced Development Time
- Reduced Development Costs

## Expertise

The most important future of testing is that it is done properly. A test plan must be developed and executed perfectly in order to be assured that a product/application is reliable. Goldstone has a wide range of expertise in developing applications from web-based application to mainframe applications. Our teams are made up of professionals who have a number of years experience in the field and are up to par with the latest tools and technologies available.

## Testing Tools and Technologies

- Rational Suite
