

Forté Services

There are two major challenges facing Forté users today - the dwindling availability of experienced resources and the business imperative to migrate to other architectures and platforms. These users are increasingly looking for partners who can help them in addressing the above challenges.

Thanks to years of close association with Forté and as a development partner of Sun Microsystems, Goldstone today specializes in providing end-to-end development, maintenance and migration solutions for Forté applications.

Forté Excellence

Goldstone Technologies is focused in providing support and maintenance services and integration services to its clients worldwide. Our resource base of Forté engineers is providing dedicated services to clients across the world, including to Sun Microsystems.

Goldstone provides Forté services in the following areas:

- Development with UDS (4GL) & Web enterprise
- Application/Product Support & Maintenance: Help Desk calls to bug fixes, Release Management & Version Management
- EAI with Fusion & Conductor (IIS)
- Integration Adapters
- Migration to different architectures such as J2EE

Goldstone Differentiators

- Automated migration approach
- In-house migration tools for greater savings
- Proven credentials, "Best Practices Certification" from Forté
- Well-defined and best-in-class processes
- Domain knowledge in several verticals
- Experienced and certified professionals
- Multitude of delivery models: T&M, Fixed-price, Onsite, Offshore and Hybrid

Proven Expertise

Goldstone has been a development and consulting partner of Forté and Sun for 4 years. We have a large pool of Forté resources and are currently the only company in India to have received 'Best Practices' certification from Forté. With projects across USA, Europe, Australia and Japan, we offer a range of Forté services and solutions over heterogeneous environments, along with flexible delivery models suiting your time and budget requirements. Our clientele include:

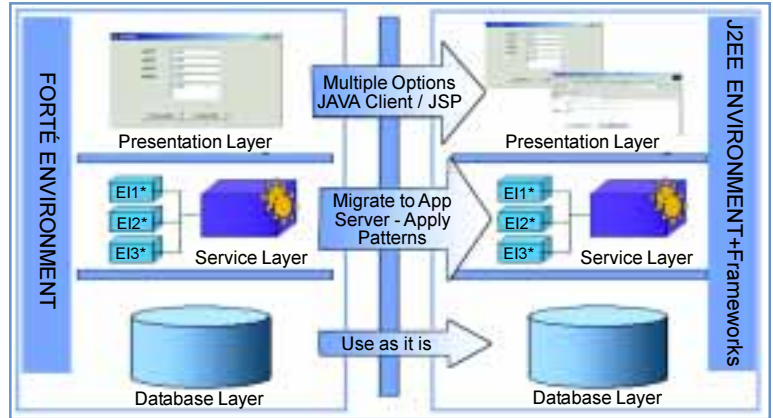

- Sun Microsystems
- Security First National Bank
- Mitsubishi
- South West Bell
- MCI Worldcom
- Longs Drugs
- Lumley Technologies
- Qwest
- Tower Automotive
- Illinois State Government

Migration Solutions

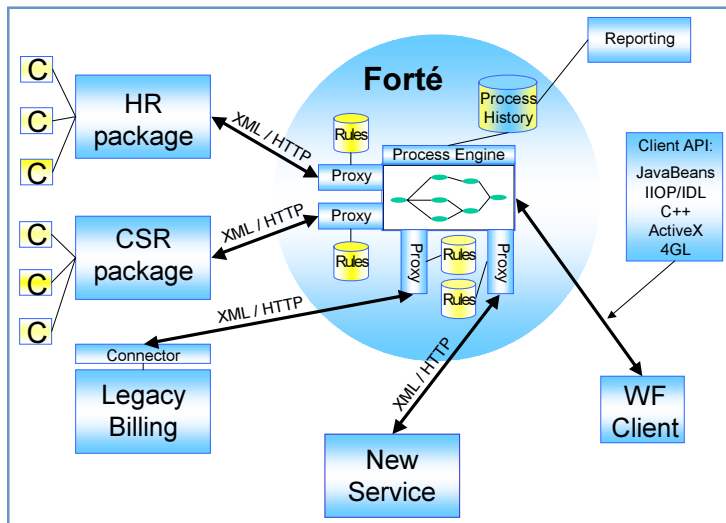

Goldstone has been helping clients to migrate their Forté application to other architectures and application servers, using a tool-based approach and our tested "Hybrid" model of migration. This approach has translated into great cost and time advantages for our clients.

The Source Code Migration is done using in-house conversion tools and the Architecture Migration is done using compatible architecture and design patterns suitable for J2EE environment, stored in Goldstone's knowledge repository.

* EI-External Integration will require Custom Transformation rules to be written for migration

Integration Solutions

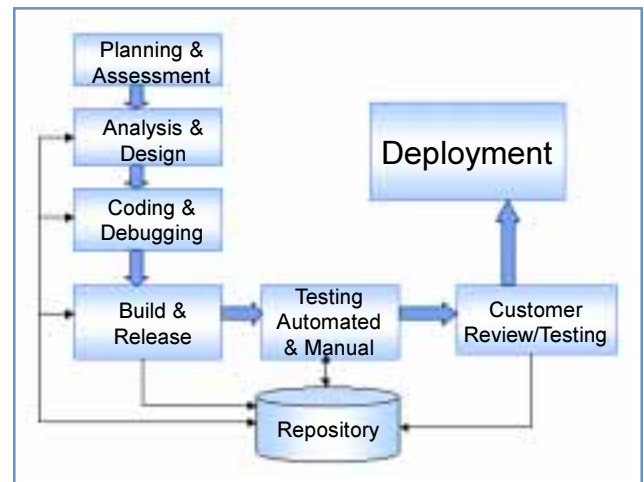

- Process-based
- Integrated development
- Enterprise-class
- Standards-based
- Custom Adapters
- ERP, SCM, Payment Systems and CRM among others
- Minimal business disruption
- On-time and within budgets
- Global implemetations and support
- Supporting diverse Integation architectures to suit our clients needs

Development Solutions

Several years of close relationships with our clients has provided Goldstone with a Forté development capability that few companies can aspire for. Goldstone has in-depth experience in developing Forté applications and products both onsite as well as from our offshore and offsite facilities.

Some of the project profiles include:

- eMerchant Banking – Account and Finance System
- Fully Processed Order Entry System
- Genisys - Insurance Workbench Solution
- Customer Acquisition Account Setup & Tracking
- Local Component Object Manager
