

Application Services

Software Applications drive life in 21st century. From a person in remote place using his mobile phone to a scientist in a space center, various Software Applications are being used. This demand for Software Applications from “Easy-to-Use” to “Complex Enterprise” is perpetual.

Goldstone Application Services division is an alignment of a) Multiple Center of Excellence (CoE) focusing on various spectrum of technologies and b) Diversified vertical - focusing on specific industry segment. This helps our customers get the best business solution using the right technology rather than just a mere technical solution. Our development process and methodologies are adhered to international standards such as ISO and SEI CMMi. Our partnership with various technology companies has always put us ahead to deliver the best solution, while utmost care is given to cost effectiveness using appropriate delivery and engagement models.

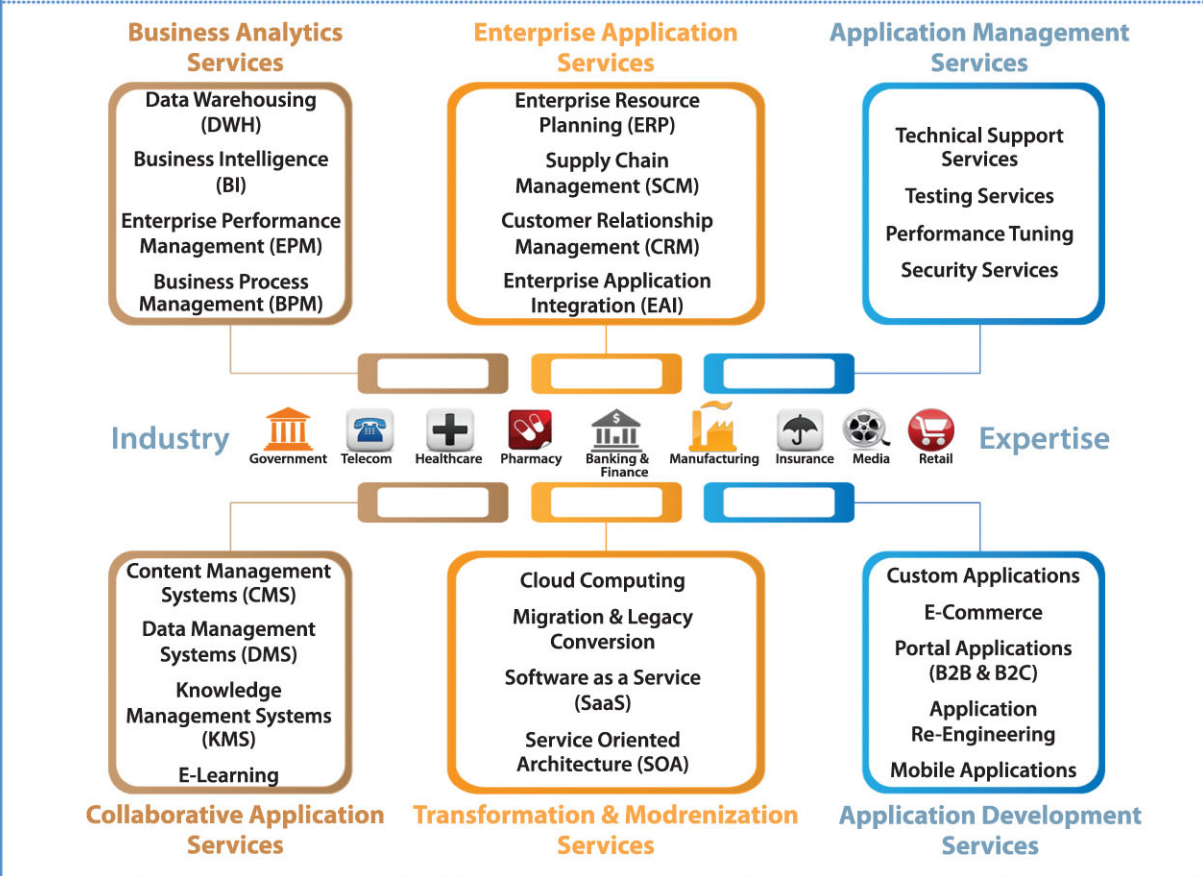

With our proven track record in various Application Services Portfolio, we are committed to develop industry specific technology solutions that help meet changing business environments. Goldstone has “tested and proven” development and project management methodologies that covers all aspects of the Software Development Life Cycle (SDLC). Our Quality Management system ensures that each phase of the SDLC has adequate reviews, controls, and check-points built into the development process.

Application Services covers a horizon of services and is befuddling for businesses to reach out for the right Application Services Company. At Goldstone, Application Services has evolved over years serving customers worldwide from different industry segments. This has enabled Goldstone to organize these Application Service Offerings in an orderly way leading to different Application Services Portfolio. At Goldstone, customers just have to match their business and technical needs to our application services portfolio to get their right solution more quickly and effectively. Our Solutions are derived from an amalgamation of domain, business and technical experts giving unsurpassed business value for our customers.
